

Model RTW

Rotating Tank Washer

- Below submergence spray with rotating fixture for cleaning small parts
- Ultrasonics capability for cleaning tough blind holes
- Stainless steel construction for long life, low maintenance and D.I. water capability
- Economical for small shops
- Compact design minimizes floor space requirements
- Advanced oil and chip removal capability
- Fully insulated for safety and efficiency
- Modular construction for flexibility
- CE compliant

 **STOELTING**[®]
A Stainless Reputation.

We can create an individualized efficient cleaning operation for you.

The RTW, Stoelting's new generation of small industrial parts washers, eliminates all CFC-based solvents and replaces them with an environmentally safe alternative. Utilizing below submergence spray with a rotating fixture, the RTW provides results that meet or exceed

your cleaning specifications for small parts cleaning applications. Its modular stainless steel construction allows the small shop or work cell to start economically with a single wash section and add additional wash, rinse and/or heated blowoff sections at a later date.

◀ Each module accepts two (2) standard 18"W x 12"D x 6"H shop baskets (custom baskets and fixturing available).

Baskets of parts (100 lb. load capacity) are immersed in solution (120 gallons, 140°F). Cleaning actions include spray under immersion, variable rotation and ultrasonics (optional). ▶

▶ Quiet zone for oil removal and chip collection includes oil skimmer and removable chip basket.

▶ The heated blowoff module also accepts two (2) baskets of parts. The Stoelting designed air plenum/air knife system provides up to 250°F of high volume air for drying. ▼

◀ Solution tanks include 21 KW immersion heaters and 3 HP pump. Heated blowoff tank includes 3 HP, 600 CFM blower and 10 KW air heater.
